Join the *No Code, Ultra Agile Revolution!*
## Build the Apps You Need. Now!

Despite recent progresses, enterprise IT systems remain rigid and costly to maintain.

PlugBI enables professionals to manage their business data and create enterprise web apps on their own, with no technical skills required.

PlugBI lets you operate differently from your competitors, innovate faster, and boost your business performance – all in record time.

Build enterprise-Grade Web Apps – No Coding Required!

Design feature-packed apps using Excel, and an artificial intelligence (AI) engine does the programming for you.

100% VISUAL SPECIFICATION

PlugBI allows any professional to define their app's interface and workflow using Excel. The platform then creates all web application logic using artificial intelligence (AI).

10X APP CREATION SPEED

With PlugBI business professionals can create the enterprise apps they need – up to ten times faster than a developer could!

KEEPS UP WITH THE DEVELOPMENT TEAM

Apps created with PlugBI match the functional depth of those developed with traditional programming-based approaches.

With PlugBI, business teams create apps with best-in-class transactional, workflow, embedded BI, analytical, calculation, simulation, and Big Data capabilities.

Apps created by teams of domain experts have functionality on par or exceeding those of commercial software packages.

ENABLES THE ULTRA AGILE ENTERPRISE

Creating a PlugBI app is as easy as drawing its interface using Excel. After just one day of training, you'll start building apps of all kinds.

Information systems powered by PlugBI are agile and adaptable.

Because PlugBI apps can be changed in minutes, they only get better with time: it's easy to imagine, test, and deploy new apps and features as your business grows and evolves.

The first software platform to enable agile "no code, no programming" creation of enterprise web apps by non-technical business teams

- Create enterprise web apps up to ten times faster than a development team.
- Improve the reliability of your processes.
- Reduce reliance on Excel.
- Enjoy agile and adaptive storage of all your data.
- Enforce collaborative business processes.
- Involve users in the creation of your enterprise apps, from start to finish.
- Break free from the constraints and costs of programming.

PlugBI Professional Services

The skilled international PlugBI Professional Services team ensures you get expert assistance at every step in your adoption and ongoing usage of the PlugBI platform.

Our Customer Success Consultants will put in place a strategic plan to help accelerate your adoption of PlugBI, reduce implementation friction, and maximize the platforms benefits.

Our team of expert PlugBI University professionals ensure your business teams are quickly proficient with our ultra agile application platform, helping them rapidly unlock its full potential. And to make sure you always have someone to turn to whenever your need help, we offer 24/7 technical support to assist you with all your custom application needs.

PlugBI Data Lake Builder

The core service of the PlugBI platform enables business and IT teams to work together to build and maintain the central repository ("PlugBI Business Data Lake") that houses all data for your PlugBI apps.

Team up to Build Your Enterprise Data Store
Working in agile mode, your IT staff and business teams with no technical expertise team up to build your company's central enterprise data store, pulling together data from multiple, heterogeneous systems.

Built-In Extract Load and Transform (ELT)
The intuitive web interface supports extraction, loading, processing, organization, storage and use of all types of data, regardless of their format and source.

Reliance on "bulk" (i.e. with no hardwired relationships between different data sets) data storage, modeled after Data Lake concepts, eliminates the need for contributors to have any knowledge of database principles.

Our Big Data architecture also lets you handle virtually unlimited data volumes.

PlugBI Designer

Our intuitive Excel plug-in turns the popular spreadsheet tool into a powerful visual environment to both specify your apps' data needs and visually design their interface.

Define Your Apps' Data Needs
In the familiar Excel environment, PlugBI Designer lets you explore your organization's PlugBI Business Data Lake and define the data sets ("PlugBI Business Views") that you want your apps to manipulate.

Visually Define Powerful Business Apps
PlugBI Designer also lets you visually specify all your apps' interfaces and workflows – leaving it to our artificial intelligence engine to turn those visual specs into working application logic.

In a matter of days, your business teams with no technical training collectively design the most complex business apps simply by using Excel to draw basic app screens (color, images, dropdown, dynamic date consultation, data input...), more advanced screens (workflow, hyperlinks, dynamic menus, dynamic calculation, simulation...) and widgets (charts, maps, gauges, dynamic arrays, ad-hoc tables with filter...)

PlugBI Server

PlugBI Server is the runtime server for all your PlugBI apps. Its unique architecture enables in-memory management of the data sets ("PlugBI Business Views") required by your apps, intelligent generation of all application logic, and their runtime execution.

The smart generation of web interfaces by an artificial intelligence (AI) engine holds the key to the PlugBI "no code, no programming" promise.

PlugBI apps offers best-in-class support for all existing enterprise information management paradigms including transactions, reporting, dynamic dashboards, portals, collaboration, what if scenarios, simulations and performance management.

Your apps' interfaces can offer basic features (dropdown, inputs, tips, notifications, alerts...), advanced functionality (workflow, dynamic menus, dynamic calculation, simulation, visual indicators...) and even widgets (charts, maps, gauges, dynamic arrays, ad-hoc tables with filter, process...)
